## Minimizing privacy risks

## From the DPO perspective

Prof. Hernan Huwyler

# The compliance think tank in the Nordics and beyond

Certifications Compliance Privacy InfoSec Risk

The unclear ownership of privacy risks is still a major issue for GDPR compliance

DPO, CISO, CIO, CPO, COO and legal advisors

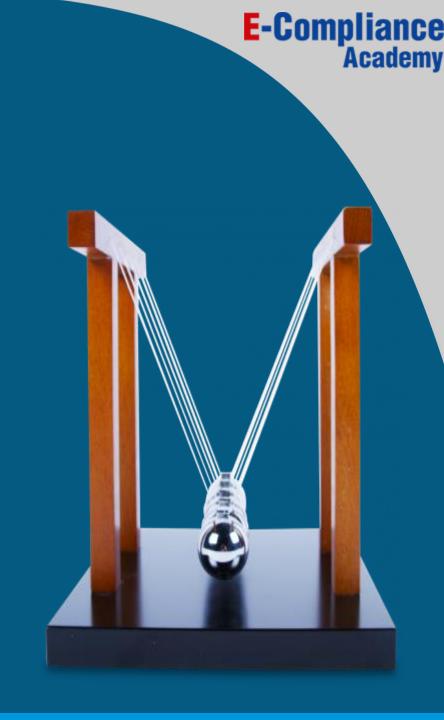

The roles to control privacy risks become uncoordinated when the GDPR implementation committees ended

Gaps in roles prevent a costefficient allocation of resources and creates blind spots

Unclear internal roles affect the efficiency of instructions, contractual requirements and due diligence of processors

The CISO monitors the risks on the confidentiality, integrity and availability of personal data

The DPO monitors the risks on the lack of GDPR compliance triggered by cyber and legal threats

## Policy ownership

#### CISO

Security policy

Acceptable use

Data classification

Access control

Loss prevention

#### **DPO**

Privacy policy

Subject requests

ROPA inventory

Consents

Breach response

Desperate need for doers able to translate legal requirements into cyber controls, SOPs and technology

E-Compliance Academy

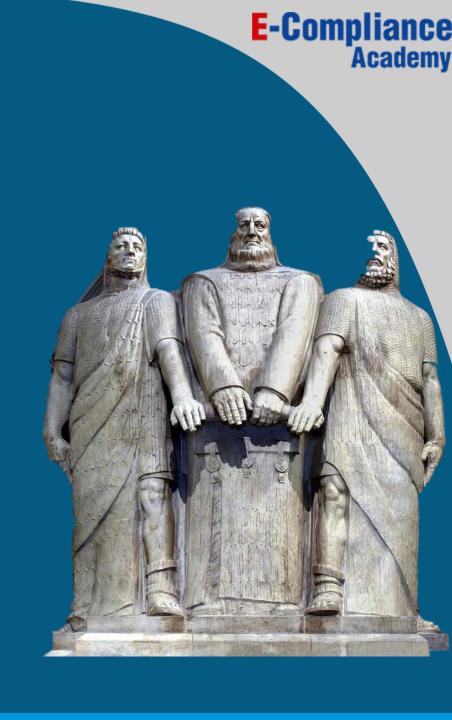

Joint and several liability

Each joined controller is liable for the full GDPR requirements of a contract with the same data subject

Joint and several liability

All privacy risks are assessed by each joined controller, even for the processing done by the partner

Solution Flow managers allow modular DPIAs to accelerate the completion

Cyber security, business and legal experts complete different risk modules

Solution

The approval flows are escalated to the DPO, the CRO and the contract owner

The binding corporate rules should cover the requirements, transfers and controls of data processing contracts

### Transfer scheme

**EU Customer**Controller

EU Data subject EU Company Processor Non EU Companies

Intra group processors

**BCP-P** 

Binding corporate rules for processors

Non-EU intra-group processors should standardize and coordinate the execution of controls and access requests
